At Fullwood, Design and Technology is a practical subject, which stimulates both intellectual and creative abilities. It prepares children to take part in the development of tomorrow's rapidly changing world by experiencing, testing, creating and evaluating.

It prepares children with essential life skills that they will need in later life through the acquisition of cooking skills and an understanding of nutrition. As pupils begin to understand and apply the principles of nutrition and healthy eating, we aim to instill a love for cooking and a different form of creative expression.

At Fullwood, we aim;

- *To develop imaginative thinking in children and to enable them to talk about what they like and dislike when designing and making.*
- *To critique, evaluate and test their ideas and products and the work of others.*
- *To enable children to talk about how things work, to draw, make prototypes and model their ideas.*
- *To encourage children to select appropriate tools and techniques for making a product, whilst following safe procedures.*
- *To explore attitudes towards the made world and how we live and work within it.*
- *To develop an understanding of technological processes, products, and their manufacture, and their contribution to our society.*

- *To develop an understanding of nutrition and learn how to cook.*
- *To foster enjoyment, satisfaction and purpose in designing and making.*

Through design and technology activities pupils develop an appreciation of quality, a sense of fine design, craft and technological applications and gain an awareness of needs of society, business and industry.
