# *Computing*

At Fullwood Primary School we provide a high quality computing education in order to equip our pupils with the skills and techniques to thrive in a world increasingly dependent on technology. The core of Computing is Computer Science which focuses on children developing their logical reasoning and computational thinking in order to develop into confident independent learners. Children are encouraged throughout their time in Fullwood to solve their own problems and to create their own programs and range of content using a range of software and hardware.

Computing also allows our children to become digitally literate where they are able to express themselves and develop their ideas through information technology.

Every child at Fullwood is taught to use the internet in a safe and respectful manner. No child should ever feel unsafe or threatened whilst using the internet at home or at school. Children are also shown how to take the necessary precautions and know where to seek help when needed. All children, parents and staff have the opportunity to become valuable citizens of our digital community.
