

We believe that effective mathematics teaching enables pupils to be confident and competent with mathematics. We aim for the following;

- We strive to develop a positive approach to mathematics regardless of a child's current attainment.
- Our belief is that all children can and will develop as mathematicians given the right opportunities and environment.
- Through providing the pupils with an effective learning environment we will promote a passion, enjoyment and aptitude for the subject of maths.

Do  
Maths

- We see it as paramount, our duty to establish an ethos where mistakes are seen as the stepping stones on the road to learning and mastery of mathematics.

- We aim to develop children's inclination to use and apply mathematics, equip children with a range of strategies that they can use to problem solve and develop children as independent learners.

- We encourage children to use a range of mental methods for calculation, choose the most appropriate for a given problem and also to explain and justify their reasoning using appropriate mathematical vocabulary.

- We feel it paramount to develop children's secure base of known facts that they can use and apply to calculations and problem solving.
