

Dear Parents,

This week in maths we have been learning about:

Number

We have practised recognising numerals, counting out objects and writing the numbers seen below. If your child is confident with these numbers, please progress to numbers up to 5, 10 or 20.

1	2	3
---	---	---

Shape, Space and Measure.

We have been discussing and ordering familiar events, such as our daily routine. We spoke about what we do when we wake up eg. change into school uniform, have breakfast, brush your teeth, put your coat on.

Ways you can support your child develop their maths skills at home:

- Show your children the numbers and ask them to tell you what they are.
- Ask your children to count out these amounts eg. "Give me two apples please, bring me one book etc. "Eat one raisin, eat two grapes".
- You can use any household objects to count eg. pasta, socks, straws.
- Count with your child when you walk down the street - look for these numbers on front doors, buses or car licence plates.
- Write the numbers with your child, show them how to do this and talk about the shape of the numbers. Encourage them to have a go at writing them using different tools eg. paint, pens.
- Make the number shapes out of playdough or biscuit dough.
- Spot and cut and stick numbers out of magazines and newspapers.
- Talk about your daily routine eg. why do we wash our hands before eating?

If you have any queries or questions please ask your class teacher.

Thank you.
