

## ALUMNI

We were lucky enough to have another former student coming to visit us at the Sixth Form to discuss his experiences at university and tell us about his current career. Tom Swinburne left the school in 2011 having achieved an excellent set of results at both GCSE and A level. He studied Maths, Further Maths, Chemistry and Physics and went on to study for a degree in Mechanical Engineering and left after four years with a Masters degree.

Tom has returned to the West Midlands and is now working as a Graduate Engineer at Jaguar Land Rover with a remit for car body structures. He explained to the Year 13s in an assembly that he was now part of a two year Product Development Graduate Scheme where he will be completing placements around the business and he is hopeful that when he returns to his 'home' department in January 2017 he will be assigned as a Body Structures Engineer on the new and upcoming vehicle programme.

Tom talked us through the different specialisms that were available in engineering, stressed the importance of gaining some work experience both whilst at school and during the degree course. He has very kindly offered to return to the school to talk to other students who are interested in engineering as a future career and is more than happy to share his insights with our students.

Who knows in a few years' time we could be driving around in a car with the body work designed by one of our former students!

If you are interested in coming into school to share your experiences since leaving Kenilworth School please contact Dr Parsons on [k.parsons@ksnadmin.ksn.org.uk](mailto:k.parsons@ksnadmin.ksn.org.uk)
