

11 June 2018

Dear Parents/Carers

The school has recently subscribed to Dynamo Maths, a fantastic resource that supports pupils who need help with their maths. It is an evidence-based research programme with an extensive set of resources, designed to address maths difficulties in a targeted way.

We have recently assessed your child using Dynamo Assessment and it has offered us a Number Sense Developmental Profile with areas to target. I would be happy to meet up with you to share the assessment results.

We have personalised a pathway for your child. The Intervention offers: **Lesson Plan, On-line Activities and Worksheets.**

The importance of the three pathways is that:

1. It provides varied experiences and allow us to see where the difficulties lie so that we can then start the process of repositioning these particular areas of maths.
2. Allows us to observe if your child is able to transfer skills across different contexts.

Supporting your child at home with Dynamo - Getting Started

Your login details are below. If your child is showing an interest in Dynamo, please do support them at home. I recommend you start with the On-line activities and allow a maximum of 10 min. There are only 10 randomly generated questions and the 10 minutes will give you ample time to repeat the modules so that we are ensuring that the skills are being sustained. Make a note in the school diary when they make extra attempts to answer the questions. This will help us to provide targeted support.

There are Lesson Plans and Worksheets that are also available. Do have a little play around the website to familiarise yourself with Dynamo Maths.

You can, if you wish, print worksheets and note areas of concern, although the school uses the Lesson Plans, do feel free to use these.

The overall aim of working with Dynamo at home is to provide practice for your child in different areas of Maths.
